

SUJET STATAPP 359 - 2026-2027

Sujet proposé par : Grosset-Touba Florian - florian.grosset-touba@ensae.fr

Organisme : CREST

Catégorie : Microéconomie Appliquée

Sujet :

Unpacking the drivers of turnover in industrial firms

Description du sujet :

Around the world, industrial firms struggle to retain their workers at the prevailing wages. High turnover, in turn, induces substantial costs to firms who need to find, hire, and train workers more frequently. Understanding the drivers of turnovers and studying interventions reducing them has high relevance for firms and policymakers alike.

A research team has established strong partnerships with factories in Ethiopia and Côte d'Ivoire, and collected detailed personnel records from these firms.

Données du sujet :

- Detailed confidential personnel records from several factories
- Survey data collected by the researchers, matched to the personnel records

Modèles envisagés du sujet :

- Predictive models (lasso, random forests, neural networks) and their diagnostic tools
- AKM models (fixed effect models used to recover individuals' characteristics)
