Sujet :

His Job, Her Job? Trends in the Division of Household Labor among Couples, 1988-2022. Analysis of the ISSP Family and Changing Gender Roles Module

Description du sujet :

Since the 1970s, women's employment and earnings have converged rapidly toward men's across rich democracies. Change in who does the cooking, cleaning, and laundry at home has been much slower, and in some countries appears to have stalled altogether—a pattern researchers have called the "stalled" or "uneven" gender revolution (Kan et al. 2022; Altintas and Sullivan 2016).

This StatApp asks: How did couples' division of household labor change between the late 1980s and the early 2020s, and what accounts for cross-national differences in this change? We will use five waves of the ISSP Family and Changing Gender Roles module (1988, 1994, 2002, 2012, 2022), which ask nationally representative samples in a growing number of countries who does specific household tasks such as cooking, cleaning, and laundry, and how equally couples share this work.

We will test whether change in the division of household labor reflects individual-level factors—partners' relative earnings and employment status, education, and gender-role attitudes—as well as country-level factors such as female labor force participation and gender ideology (Mandel and Lazarus 2021). Random-effects models will describe cross-national variation in the division of household labor and its country-level correlates; fixed-effects models, exploiting the repeated cross-sections, will isolate within-country change net of time-constant country characteristics.

Statistical software will be Stata or R, depending on the students' preferences.

At the end of this project, students will have:

- An excellent understanding of random- and fixed-effects models for repeated cross-sectional, cross-national survey data
- An excellent understanding of the ISSP Family and Changing Gender Roles module, one of the longest-running cross-national data sources on gender and family life
- With effort, perseverance, and a bit of luck, the chance to publish an article in an international peer-reviewed journal

Données du sujet :

The Family and Changing Gender Roles module of the International Social Survey Programme (ISSP) is a cross-national survey on attitudes and behaviors related to gender roles, work, and family life. It has been fielded five times to date—in 1988, 1994, 2002, 2012, and 2022—with the number of participating countries growing from a handful in 1988 to more than 30 in the most recent wave. In every wave, respondents report who in their household usually does specific tasks (household shopping, cooking, cleaning, laundry, small repairs) on a scale from "always me" to "always my partner," alongside detailed information on respondents' and partners' employment, earnings, education, and attitudes toward gender roles. Data and documentation for each wave are freely available through GESIS: <https://www.gesis.org/en/issp/data-and-documentation/family-and-changing-gender-roles>, including the 1988, 1994, 2002, 2012, and 2022 waves.

Modèles envisagés du sujet :

Random-effects (multilevel) models, with individuals nested in country-waves nested in countries, to describe cross-national and over-time variation in the division of household labor and to test country-level predictors such as female labor force participation and gender ideology. Fixed-effects models exploiting the repeated cross-sections across waves to control for unobserved, time-constant country characteristics and isolate within-country change. Statistical software: Stata or R, depending on student preference.

Bibliographie du sujet :

Mandel, Hadas, and Amit Lazarus. 2021. "Contextual Effects on the Gendered Division of Housework: A Cross-Country and Cross-Time Analysis." *Sex Roles* 85(3):205-220. doi: 10.1007/s11199-020-01215-0. This article uses the same ISSP Family and Changing Gender Roles module (2002 and 2012 waves) to test how country-level female labor force participation and gender ideology shape the division of housework?closely related prior work that motivates this StatApp's country-level focus.

Kan, Man-Yee, Muzhi Zhou, Kamila Kolpashnikova, Ekaterina Hertog, Shohei Yoda, and Jiweon Jun. 2022. "Revisiting the Gender Revolution: Time on Paid Work, Domestic Work, and Total Work in East Asian and Western Societies 1985-2016." *Gender & Society* 36(3):368-396. doi: 10.1177/08912432221079664. This article documents uneven, sometimes stalled, cross-national change in the gendered division of paid and domestic work over three decades.

Altintas, Evrim, and Oriel Sullivan. 2016. "Fifty Years of Change Updated: Cross-National Gender Convergence in Housework." *Demographic Research* 35:455-470. doi: 10.4054/DemRes.2016.35.16. This article provides long-run, half-century context on the pace of cross-national convergence in housework, motivating the more recent period examined here.
